Summary

AI-focused Software Engineer with experience building production-scale ML-driven platforms, multimodal AI pipelines, and distributed backend systems. Proven ability to translate research and experimentation into deployable products, with hands-on work across model orchestration, cloud infrastructure, and full-stack development. Currently completing M.S. in Computer Engineering at NYU, graduating May 2026.

Education

New York University (NYU)

Aug 2024 - May 2026

MS in Computer Engineering - New York, NY.

GPA: 3.1

Relevant Coursework: Applied Matrix Theory, Machine Learning, Artificial Intelligence, Database Systems, Distributed Systems, Computer Networks, Operating Systems, Blockchain.

Savitribai Phule Pune University

Aug 2019 - May 2023

B.E (Honors) AI & ML - Pune, India

GPA: 3.4

Relevant Coursework: Data Structures and Algorithms, Object-Oriented Programming, Software Engineering, Database Management Systems, Operating Systems.

Technical Skills

Programming Languages: Python, JavaScript, TypeScript, Java, C++, SQL

Machine Learning & AI: PyTorch, TensorFlow, Scikit-learn, NLP, Deep Learning, Reinforcement Learning, LLM Integration

Frameworks & Libraries: React, Next.js, Node.js, Express, Spring Boot, Hibernate

Data & Processing: Pandas, NumPy, Apache Spark

Cloud & DevOps: AWS, Docker, Git, CI/CD, Linux, Microservices

Databases: PostgreSQL, MongoDB

Tools: REST APIs, WebSockets

Familiar With: Figma, Microsoft Azure, Power BI, Google Cloud Platform (GCP)

Work Experience

Research Developer Intern

Jun 2025 - Dec 2025

Scrypted Inc - Remote

Tech: TypeScript, Node.js, Express, React, Next.js, Tailwind CSS, AWS, Docker, REST APIs, AI Model Integration, Video Processing Pipelines

- Architected and deployed an AI-powered video generation platform processing 1,000+ jobs/day by building an asynchronous orchestration service (Node.js, Express, TypeScript) to coordinate model execution and post-processing pipelines.
- Integrated multiple multimodal models (Veo, Flux, Kling) into a unified inference workflow, implementing prompt validation, retry logic, and batching to reduce failed jobs by 40% (from job failure logs) and cut P95 render time by 50%.

- Designed configurable AI workflow tooling that allowed non-engineers to compose model chains (text → image → video → edit), accelerating experimentation and reducing feature launch cycles from days to hours.
- Built a browser-based video editor using React, Next.js, and Tailwind with support for AI-generated assets, timeline composition, and reusable templates that reduced manual editing time by 60% (editor telemetry).
- Contributed to CRPC decentralized coordination protocol, implementing commit-reveal-validation flows and backend services supporting multi-agent execution across Web2/Web3 infrastructure.

Software Engineering Intern (Technology Integration)

May 2024 - Aug 2024

BankBazaar.com - Mumbai, India

Tech: REST APIs, OpenAPI/Swagger, SQL, Data Analytics, API Integration, Documentation Automation

- Revamped API documentation using OpenAPI/Swagger, improving developer onboarding efficiency and reducing integration errors.
- Built internal analytics workflows to monitor feature adoption and performance metrics, supporting product decision-making with data-driven insights.

Projects

TitleChain - Software Engineering Contributor - NYC, NY

June 2025 - Sept 2025

Tech: Python, PyPDF2, Tesseract OCR, NLP, JSON Schema Processing, REST APIs, Data Extraction Pipelines

- Built OCR/NLP parsing pipelines to convert title insurance PDFs into structured JSON using PyPDF2, Tesseract, and schema-driven extraction.
- Implemented ALTA policy clause-tagging system to classify Covered Risks, Exclusions, and Endorsements for automated risk review workflows.
- Developed REST APIs to route parsed data into downstream analytics and UI systems, enabling scalable document intelligence processing.

Awards & Hackathons

Coinbase CodeNYC 2025 - 1st Place (Data API Track), 3rd Place (X401 Track) - Built

blockchain-integrated AI workflows using Coinbase APIs and Dynamic.xyz.

Qualcomm Snapdragon Multiverse Hackathon 2025 (Princeton) - Top 30 Finalist - Developed

real-time AI/graphics prototype leveraging Snapdragon hardware acceleration.

ETHGlobal New York 2025 - Participant - Engineered decentralized application integrating on-chain identity and AI-driven automation.

Publications

AI-Driven Query Optimization Using Intelligent Indexing and Caching

Feb 2025 - May 2025

EDULEARN 2025 Conference

Link - <https://library.iated.org/view/TEDESCHI2025ANA>

Presented research on integrating machine learning models into database query planning, achieving 1.5× performance improvement and reduced execution latency through adaptive indexing strategies.
